THURSDAY

CaRMS INTERVIEWS

FRIDAY

0700 CASE MANAGEMENT ROUNDS
Anesthesia Library
Dr. Curtis Nickel

Case for Discussion:
You are asked to assess a 70yo male in the ICU for cervical spine fixation within the week. He currently has a uncuffed tracheostomy in place. He has a history of Guillen Barre, ankylosing spondylitis, and emergent surgical airway. How do you assess this patient and plan for the OR.
